

Urban detective

Identify the wildlife living in parks or green spaces

Bee

There many different types of bees but we almost all have stripy bodies and we fly from flower to flower, collecting pollen.

Fox

I eat worms and insects and sometimes the contents of your bin. I prefer places I can hide, like under sheds and in overgrown gardens.

Grey squirrel

I make a nest in trees called a drey. I gather nuts, acorns and roots and sometimes bury them. You can hear me chattering in the trees.

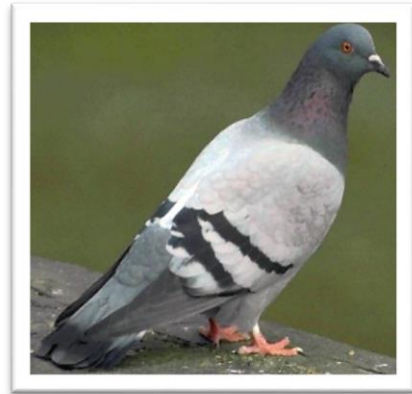

Hedgehog

I live in hedgerows, woodlands and meadows, as well as suburban gardens. I eat worms, snails, slugs and insects.

Pigeon

We like to live in groups and you'll often see us nesting under railway arches and on buildings. We eat seeds and insects and you'll hear us cooing.

Snail

There are lots of different types of snail but you'll find us all under leaves or in cool, dark places. We nibble green leaves and leave a silvery trail so you'll see where we've been.

Sparrow

I live almost everywhere, particularly places close to humans. I eat anything in your bird feeder as well as weeds and insects.

Starling

We like to live in groups and sometimes fly in huge flocks called a murmuration. We eat fruit and insects, and live in trees. Our feathers are glossy and speckled.
