

Cosy Nest

If you look carefully you might see a bird's nest up in a tree or in a bush. Did you know that birds don't build nests to sleep in – instead they're a comfy place to lay their eggs and keep their babies warm.

Why not try making your own nest using things found on the forest floor. Sticks, twigs and mud make a strong outside and feathers, grass or wool can make a soft, cosy inside.

If you want to be just like a bird, who only has a beak, try making your nest with just one hand.

If you find leaves and petals on the floor you can make it extra colourful!
