

Whirly bird step by step

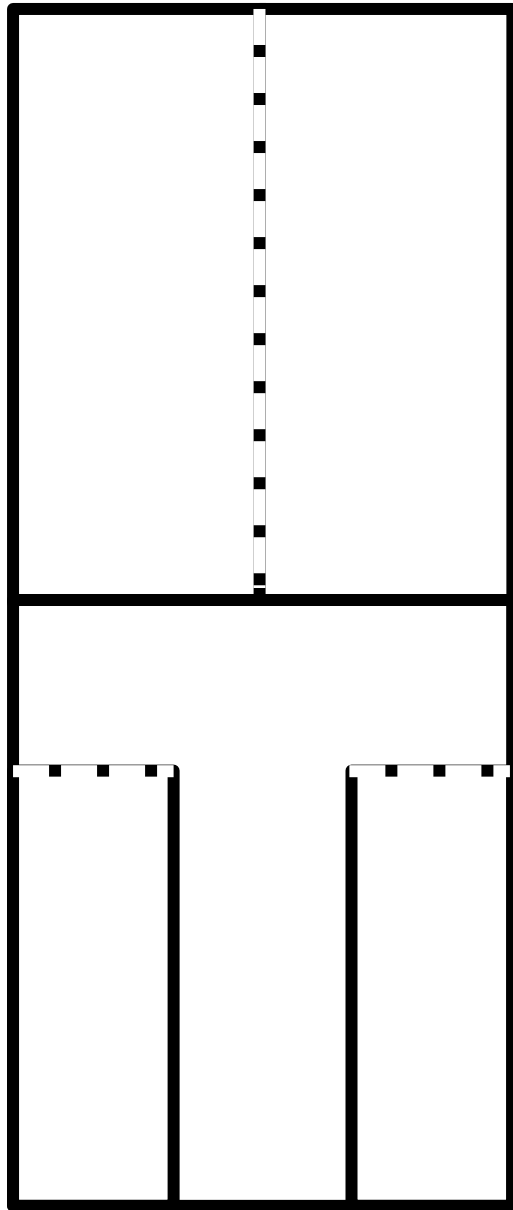

1. Take the paper, and draw a rectangle no bigger than 20 cm long and 10 cm wide. Cut this rectangle out.
2. Put the paper in front of you so it's portrait (the shorter sides at the top and bottom, and the longer sides on the left and right). Fold the paper in half horizontally – fold the top down so it meets the bottom.
3. Unfold the paper. The fold should split the paper into two rectangles.

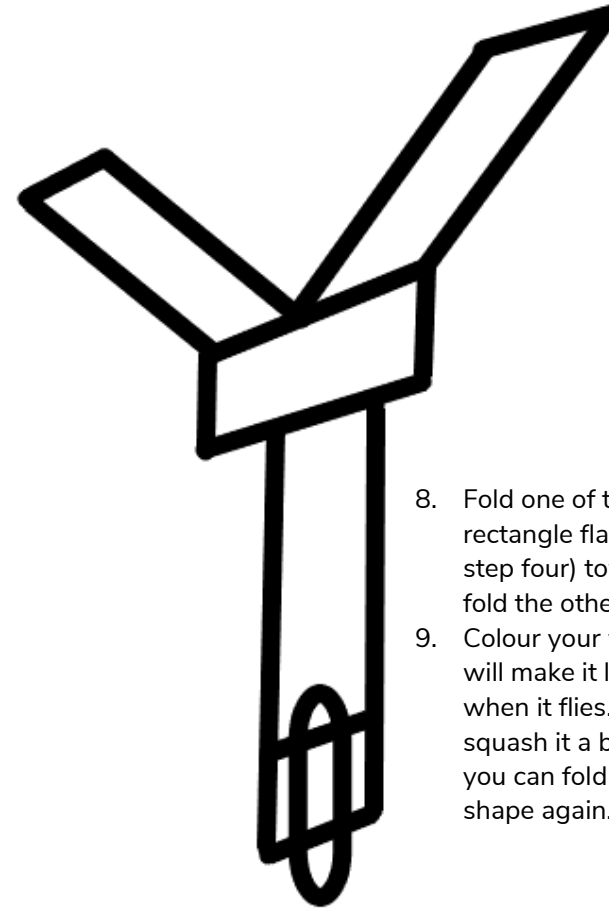

4. Draw a vertical line down the top rectangle, from the top to the bottom. Cut along this line, so the top rectangle is split into two rectangle flaps. These are the rotors.

5. Turn the bottom rectangle into a T shape, by drawing two rectangles, one at the bottom left, and one at the bottom right.
6. The top of the T should touch the rectangle flaps you created in step four, and the bottom should be about the same width as each rectangle you draw in step five.
7. Cut along the top of the two rectangles you drew in step five, so the bottom rectangle becomes a T shape with two flaps.

8. Fold one of the rotors (one of rectangle flaps you created in step four) towards you, and fold the other away from you.
9. Colour your whirly bird – this will make it look even better when it flies. It's okay if you squash it a bit as you colour, you can fold it back into shape again.
